- Hot melt glue carton closing
- Easy carton magazine loading

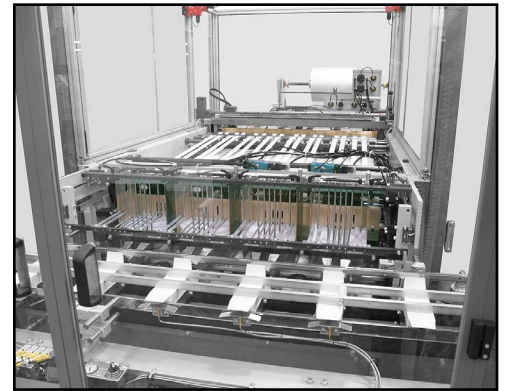

Twist & Load Cartoner

HZ-100 Horizontal Cartoner

The Thiele HZ-100 Twist & Load Cartoner is specifically designed to handle stackable products. The HZ-100 utilizes a horizontal carton magazine and rotary carton set-up for positive opening and placement of cartons into the carton flights.

Multiple carton load stations increase throughput performance while rotary flap tuckers and adjustable carton plows efficiently close the carton flaps when using hot-melt adhesive. Sealed cartons are then discharged from the machine by side compression belts.

Let Thiele Technologies help you achieve both higher productivity and profits. Thiele offers the highest level of support from product handling solutions to defining specifications to install and integration on your production line.

Multiple carton load stations

Key Features
