

Vertical Auger Bagging System Slidell 3110 PowderPacker Pro

Key Features

- Totally automatic from start to finish with the push of a button
- Complete bag-top control offers consistency and flexibility to run variable length bags
- Better lift assembly design reduces maintenance
- New bag guides for smoother delivery
- Improved counterweight design for better balanced top drive
- Rugged design minimizes vibration and increases accuracy

Vertical Auger Bagging System

Slidell 3110 PowderPacker Pro

Thiele's Slidell 3110 PowderPacker Pro uses a time-tested quality design and enhances it with the latest in design and technology. This completely automated packaging system offers virtually dust-free bagging for most difficult to handle powders, particularly titanium dioxide, resins and pigments.

Acquired by Thiele in 2006, Slidell produced bagging equipment for many challenging powder applications. Capitalizing on excellent design, we've added updates to make a great machine even better.

The PowderPack Pro uses a vertical auger system to maintain constant bag top control, from bag pick up through sealing, while offering the ultimate in dust control. This bagging system perfectly handles pinch bottom, open mouth and recyclable plastic bags.

Features and Benefits

- Fully automatic - bag placing, feeding, bag top registration, bag opening, weighing and bag closing - from start to finish, accomplished with the press of a button
- New bag guides for smoother delivery
- Improved counterweight design for better balanced top drive
- Total bag top control offers consistency and allows the flexibility to run variable length bags
- Two-stage, variable speed vertical auger feed system virtually eliminates dust
- Bottom-up auger filling eliminates bag deflation and flattening
- Innovative augers and agitator offer better compression - saving money by using smaller bags that handle better during palletizing
- Extremely rugged and robust design minimizes vibration and increases accuracy
- Updated user-friendly touchscreen and Allen-Bradley controls make operation easy, minimizing learning time and operator error
